SUMMARY PROFILE

Software Engineering student at IPB University with a focus on Web Development. Experienced in building real-world applications based on user needs and collaborating within development teams. Skilled in developing end-to-end applications from frontend to backend, including the design and integration of REST APIs. Technologies include React.js, Next.js, Laravel, and Node.js, Python

WORK EXPERIENCE

Co Founder & Web Developer

KODEHANA Digital Agency - Bogor, Indonesia

Oct 2025 - Present

- Developed responsive and interactive web applications for diverse agency projects utilizing Laravel.
- Collaborated with team members to synchronize code and document feature specifications, ensuring a seamless development workflow.
- Conducted regular software testing to minimize bugs and ensure high-quality application performance prior to production release.

Lead Frontend Engineer (Freelance)

Jan - May 2026

Web Absensi & Monitoring SMK Madya - Depok, Indonesia

- Led frontend development for a geolocation-based attendance system serving 100+ users, significantly improving the accuracy of daily attendance tracking.
- Developed responsive dashboards and attendance workflows to support daily check-ins, attendance monitoring, and reporting activities.
- Integrated frontend applications with RESTful APIs to provide real-time attendance data, location validation, and user management features.

Frontend Developer (Freelance)

Oct - Nov 2025

Dinas Kesehatan Cianjur - Cianjur, Indonesia

- Developed a centralized web dashboard using Laravel to digitize health data management, significantly streamlining reporting workflows for clinic staff.
- Designed and implemented CMS features to improve efficiency in managing health-related content
- Collaborated with team members to develop and refine application features for better usability

Frontend Developer (Freelance)

Jan - May 2025

Reva Baju Anak - Cianjur, Indonesia

- Developed a responsive e-commerce web application interface using React.js, focusing on usability and seamless user experience
- Implemented core e-commerce features including product listing, shopping cart, and checkout flow
- Integrated Midtrans Snap payment gateway to enable secure and user-friendly payment processing

Backend Developer (Freelance)

Sep - Dec 2025

Mitra Bangun Desain - Bogor, Indonesia

- Enhanced client approval workflows by designing and implementing a secure digital signature feature, drastically reducing document verification time.
- Integrated RESTful APIs between frontend and backend to enable seamless data flow
- Delivered a system that enhanced efficiency in document signing workflows for clients

PROJECTS

Waste Detection AI (YOLO)

Jan - Jun 2026

Tech stack: Python, FastApi, YOLO, Docker, Gemini API

- Developing an AI-powered waste detection system using YOLOv8 to identify and classify plastic waste from image inputs.
- Building a FastAPI-based backend service to process detection results and expose them through API endpoints.
- Integrating Gemini APIs to generate contextual insights and waste management recommendations.

Fast Fashion Academic Project

Mar - May 2025

Tech stack: Next.js, Supabase, OpenStreetMap, GeoJSON, Leaflet

- Developed a web-based geospatial platform to help users discover fashion stores through interactive digital maps.
- Implemented location-based search and filtering features, enabling users to find stores by category and geographic area.
- Integrated interactive mapping technologies to visualize store locations and improve accessibility to local fashion businesses.

Mitra Home Mobile Apps

Jul - Aug 2025

Tech stack: Java, Android Studio, Firebase

- Developed a mobile application for internal company operations, providing employees with centralized access to work-related information.
- Implemented scheduling features to help employees view and manage their work schedules efficiently.
- Built mortgage (KPR) and tax calculation tools to assist employees in accessing financial information and planning decisions.

PoultryLink Academic Project

Jan - Jun 2024

Tech stack: HTML, CSS, Javascript, Axios, Laravel, Mysql

- Developed a responsive web-based marketplace interface for a multi-vendor poultry platform, improving accessibility for farmers and buyers
- Designed and implemented user workflows including product exploration, ordering, and transaction processes
- Integrated RESTful APIs to ensure real-time data synchronization for products, inventory, and orders

EDUCATION

IPB University (Sekolah Vokasi)

Bachelor of Applied Science (D-IV) in Software Engineering Technology

August 2023 - present

PUBLICATION

Rival Fitra Dermawan, et al. Black Box Testing Using Equivalence Partitioning on Teman Ternak Website. Current STEAM and Education Research, Vol. 3, 2025. doi.org/10.58797/cser.030303

SKILLS & OTHERS

Technical Skills: Software development lifecycle, JavaScript, TypeScript, React.js, Next.js, Node.js, Python, Laravel, Git, Docker, Software Testing, Express.js, Python, FastAPI, Rest API

Databases: PostgreSQL, MySQL, NeonDB, Supabase, Firebase

Soft Skills: Problem Solving, Team Work, Communication, Time Management

Language: Indonesia, English
